

## Trimble Grade Control Systems

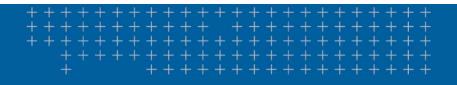

GCS900 3D for Motor Graders

rimble offers the heavy and highway contractor the broadest range of Grade Control Systems in the industry. From 2D laser or sonic based to 3D GNSS or Total Station based, Trimble systems are rugged, easy to use, fully upgradeable and portable, and flexible enough to meet a wide range of application and jobsite requirements.

The Trimble<sup>®</sup> GCS900 Grade Control System with automatic blade control maximizes motor grader performance. Whether grading simple pads and slopes or complex design surfaces and alignments the operator can get to grade at high speeds, without sacrificing grade control accuracy or quality of the final graded surface.

Configuration	Application
Single GNSS and Cross Slope	Roads/highways - rough grading Large earthmoving projects - dams, reclamation Landfills/ waste deposits Commercial/residential site prep - pads, grading for large slabs Land reclamation projects
Dual GNSS	Bulk earthworks Roads/highways/railways - rough grading Landfills, waste deposits, projects with steep slopes Commercial/residential site prep - complex design Embankments, retention ponds
Single / Dual GNSS with Laser Augmentation	Roads/highways/railways – fine grading Airport construction – runways, tarmacs Commercial/residential site prep - complex designs, slabs, pads
Universal Total Station and Cross Slope	Roads/highways/railways – finished grading Airport construction – runways, tarmacs Commercial/residential site prep - complex designs Subdivisions - pads, local infrastructure

## **Trimble Grade Control Systems**

### GCS900 3D for Motor Graders

#### (ey System Features:

CB450 or CB460 full-color graphical control box with internal lightbars - 2D or 3D capable

On-machine software available in 25 languages, configurable on-the-fly, with a button press

Integrated smart GNSS antenna, cab and blade mountable, quick release mounting for removal

Indicate or automatic blade control configurations

Auto-sideshift of the motor grader blade supported

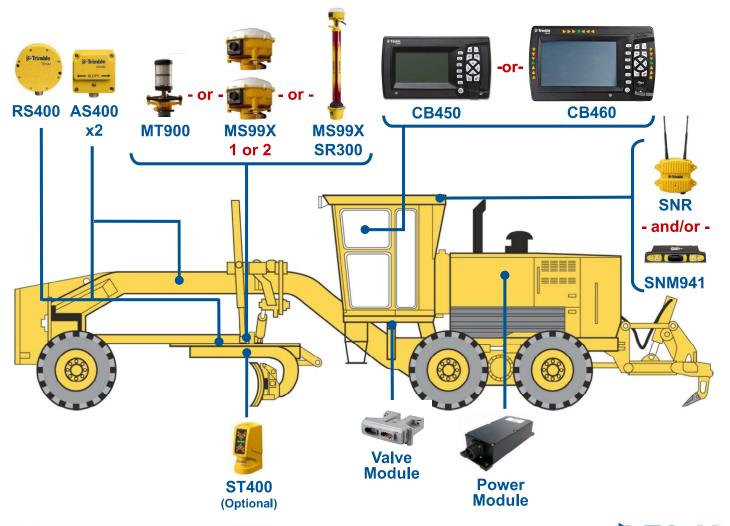

Dual GNSS blade mounted solution provides the most versatile grading solution on the market

On-machine components are portable between machine types, without software/firmware upgrades

On-machine components are modular and can be added or removed depending upon applications

Multiple system configurations for fine and finished grade applications, depending on project requirements – GNSS with Laser Augmentation and Universal Total Station based solutions

Global solutions for two-way data transfer or synchronization of data between machine and office

TRANSFORMING THE WAY THE WORLD WORKS
